

CONTENTS

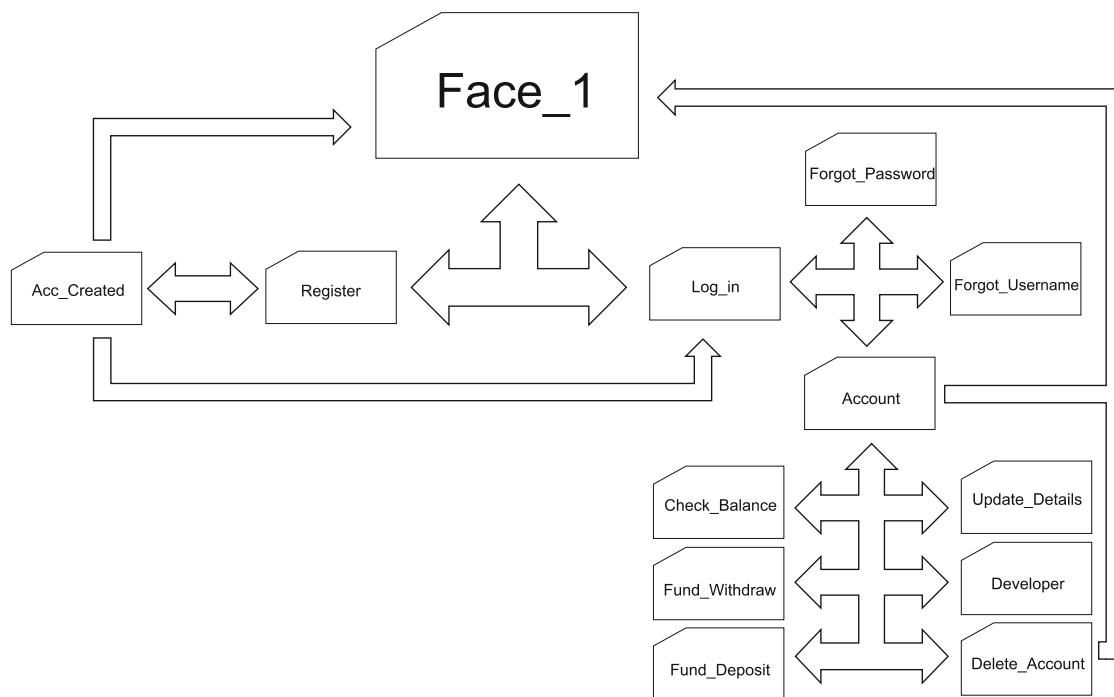

- Introduction to the Project
- Package Tree – Basic structure of the interfaces
- The Interfaces

Introduction

The most common application used other than social networking is the Banking application. The project is mainly based on three basic SQL functions Add, Delete and Update record. The project is the basic version of what a Banking Application is like. The application is made up with Java and MySQL as the base and is developed using the NetBeans Application. Hope you enjoy using!

Package Tree

The package tree defines the basic connection of the interfaces with one another.

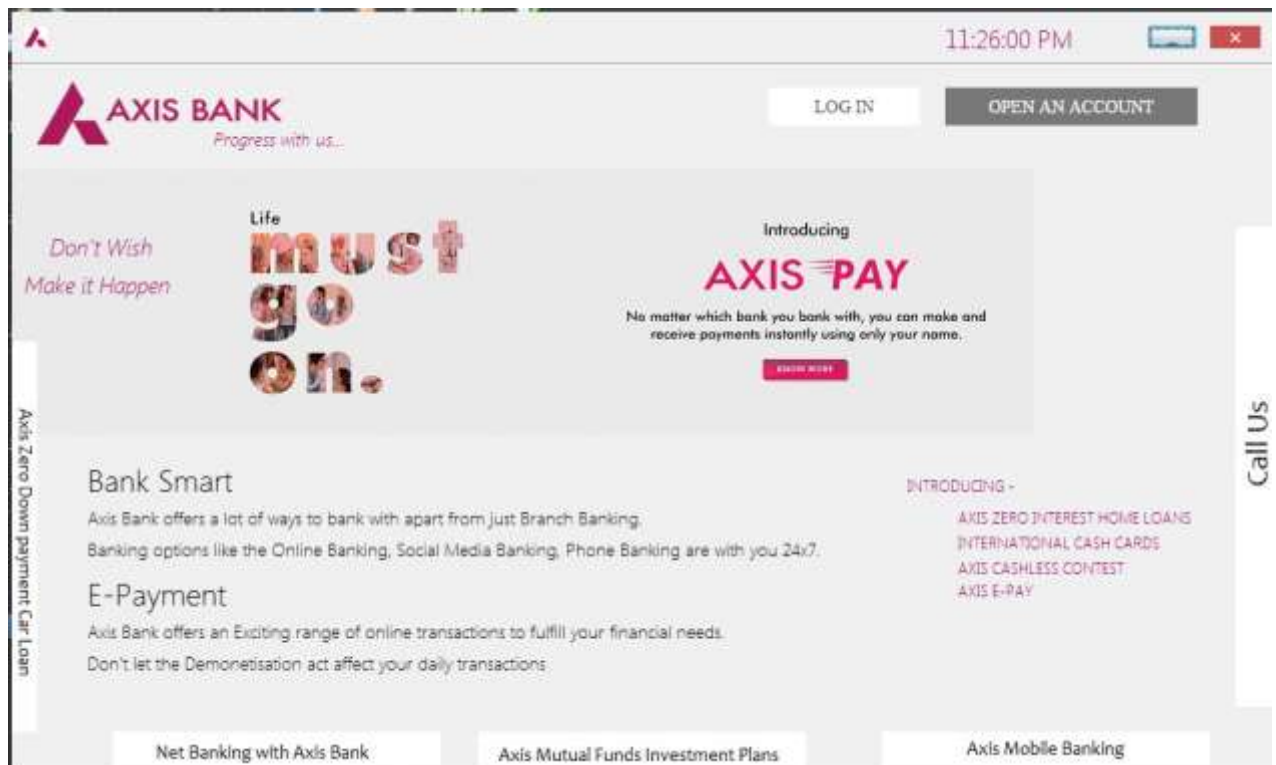

The Interfaces

The consists of 13 different interfaces as follows-

- Face_1
- Register
- Acc_Created
- Log_in
- Forgot_Password
- Forgot_Username
- Account
- Check_Balance
- Fund_Withdraw
- Fund_Deposit
- Fund_Transfer
- Update_Details
- Delete_Account

Face_1

```

```

Register

The screenshot shows a web form titled "Savings Account" with a "Back" button and a clock showing 11:25:15 PM. The form includes fields for First Name (Ram), Middle Name (Kumar), Last Name (Mahra), Gender (Male), Father's Name (Ramesh Mahra), Mother's Name, Nationality (INDIAN), Address (Silguri), State (Andaman & Nicobar Islands (LIT)), Pincode (734007), Aadhar Number (123456789), Email-ID (ram@gmail.com), Keep a username (ram), Password (***), and Amount to Deposit at the time of Account Opening (₹ 100). A "Submit" button is at the bottom. A modal message box in the center says "Account Created Successfully" with an "OK" button.
